**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

## Preface

---

---

### NOTICE TO CUSTOMERS

All documentation becomes dated, and this manual is no exception. Microchip tools and documentation are constantly evolving to meet customer needs, so some actual dialogs and/or tool descriptions may differ from those in this document. Please refer to our website ([www.microchip.com](http://www.microchip.com)) to obtain the latest documentation available.

Documents are identified with a “DS” number. This number is located on the bottom of each page, in front of the page number. The numbering convention for the DS number is “DSXXXXXXXXA”, where “XXXXXXXX” is the document number and “A” is the revision level of the document.

For the most up-to-date information on development tools, see the MPLAB® IDE online help. Select the Help menu, and then Topics, to open a list of available online help files.

## INTRODUCTION

This chapter contains general information that will be useful to know before using the MCP39F511A Power Monitor Demonstration Board. Items discussed in this chapter include:

- [Document Layout](#)
- [Conventions Used in this Guide](#)
- [Recommended Reading](#)
- [The Microchip Website](#)
- [Customer Support](#)
- [Document Revision History](#)

## DOCUMENT LAYOUT

This document describes how to use the MCP39F511A Power Monitor Demonstration Board as a development tool to emulate and debug firmware on a target board. The manual layout is as follows:

- **Chapter 1. “Product Overview”** – Important information about the MCP39F511A Power Monitor Demonstration Board.
- **Chapter 2. “Installation and Operation”** – Provides information on using the MCP39F511A Power Monitor Demonstration Board.
- **Appendix A. “Schematic and Layouts”** – Shows the schematic and layout diagrams for the MCP39F511A Power Monitor Demonstration Board.
- **Appendix B. “Bill of Materials (BOM)”** – Lists the parts used to build the MCP39F511A Power Monitor Demonstration Board.

## RECOMMENDED READING

This user's guide describes how to use the MCP39F511A Power Monitor Demonstration Board. Another useful document is listed below. The following Microchip document is available and recommended as a supplemental reference resource:

**MCP39F511A Data Sheet – “AC/DC Dual-Mode Power-Monitoring IC with Calculation and Energy Accumulation” (DS20006044)**

## THE MICROCHIP WEBSITE

Microchip provides online support via our website at [www.microchip.com](http://www.microchip.com). This website is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the website contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQs), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

## PRODUCT CHANGE NOTIFICATION SERVICE

Microchip's customer notification service helps keep customers current on Microchip products. Subscribers will receive e-mail notifications whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip website at [www.microchip.com](http://www.microchip.com), click on **Product Change Notification** and follow the registration instructions.

## CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support

Customers should contact their distributor, representative or field application engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the website at:  
<http://www.microchip.com/support>.

## DOCUMENT REVISION HISTORY

### Revision A (June 2018)

- Initial release of this document.

# **MCP39F511A Power Monitor Demonstration Board User's Guide**

---

---

NOTES:

---

---

## Chapter 1. Product Overview

---

---

### 1.1 INTRODUCTION

The MCP39F511A Power Monitor Demonstration Board is a fully-functional, single-phase power and energy monitor. The system calculates active power, reactive power, RMS current, RMS voltage, active energy (both import and export), reactive energy and other typical power quantities, as defined in the MCP39F511A data sheet.

The MCP39F511A Power Monitor Demonstration Board uses the Power Monitor Utility software for evaluation through a USB connection to the board. The Power Monitor Utility software is used to calibrate and monitor the system, and can be used to create custom calibration setups. For most accuracy requirements, only a single-point calibration is needed. The software offers an automated step-by-step calibration process that can be used to quickly calibrate power meters.

A download link for this software can be found on the demonstration board's web page. For instructions on how to use the software, refer to the software's supporting documentation included within the application installation package.

**FIGURE 1-1:** MCP39F511A Power Monitor Demonstration Board.

## **1.2 WHAT DOES THE MCP39F511A POWER MONITOR DEMONSTRATION BOARD KIT INCLUDE?**

This MCP39F511A Power Monitor Demonstration Board kit includes:

- MCP39F511A Power Monitor Demonstration Board (ADM00667)
- AC Line Cable
- IEC to Female AC Load Cable
- Mini-USB Cable
- Important Information Sheet

---

## Chapter 2. Installation and Operation

---

### 2.1 GETTING STARTED

To use the MCP39F511A Power Monitor Demonstration Board, follow the steps described in the sections below. The meter is calibrated at a load current of 5A [rms] and the maximum current ( $I_{MAX}$ ) is 15A [rms].

It is not recommended to put more than 15A [rms] through the AC plugs mounted on the Printed Circuit Board (PCB).

#### 2.1.1 Wiring Connections

Figure 2-1 identifies the line and the load connections of the MCP39F511A Power Monitor Demonstration Board.

**FIGURE 2-1:** Connecting the MCP39F511A Power Monitor Demonstration Board.

#### 2.1.2 Powering the Meter

The meter turns on when the line input voltage is between 90V [rms] and 230V [rms].

#### 2.1.3 Connecting the USB Cable to a PC

1. The Power Monitor Utility software needs to be installed in order to proceed.
2. Select the appropriate COM port. The connection status in the bottom-left corner of the software displays “Meter Connected”, when the meter is connected correctly. The status “Meter Disconnected” is displayed when no meter is found. Check that the correct COM port was selected and try again.
3. Click the **Start** button in order to begin showing output data and UART transmitted/received packets of data exchanged between the PC and the MCP39F511A device.

**Note:** For instructions on using the software GUI, refer to the help file located in the program installation directory.

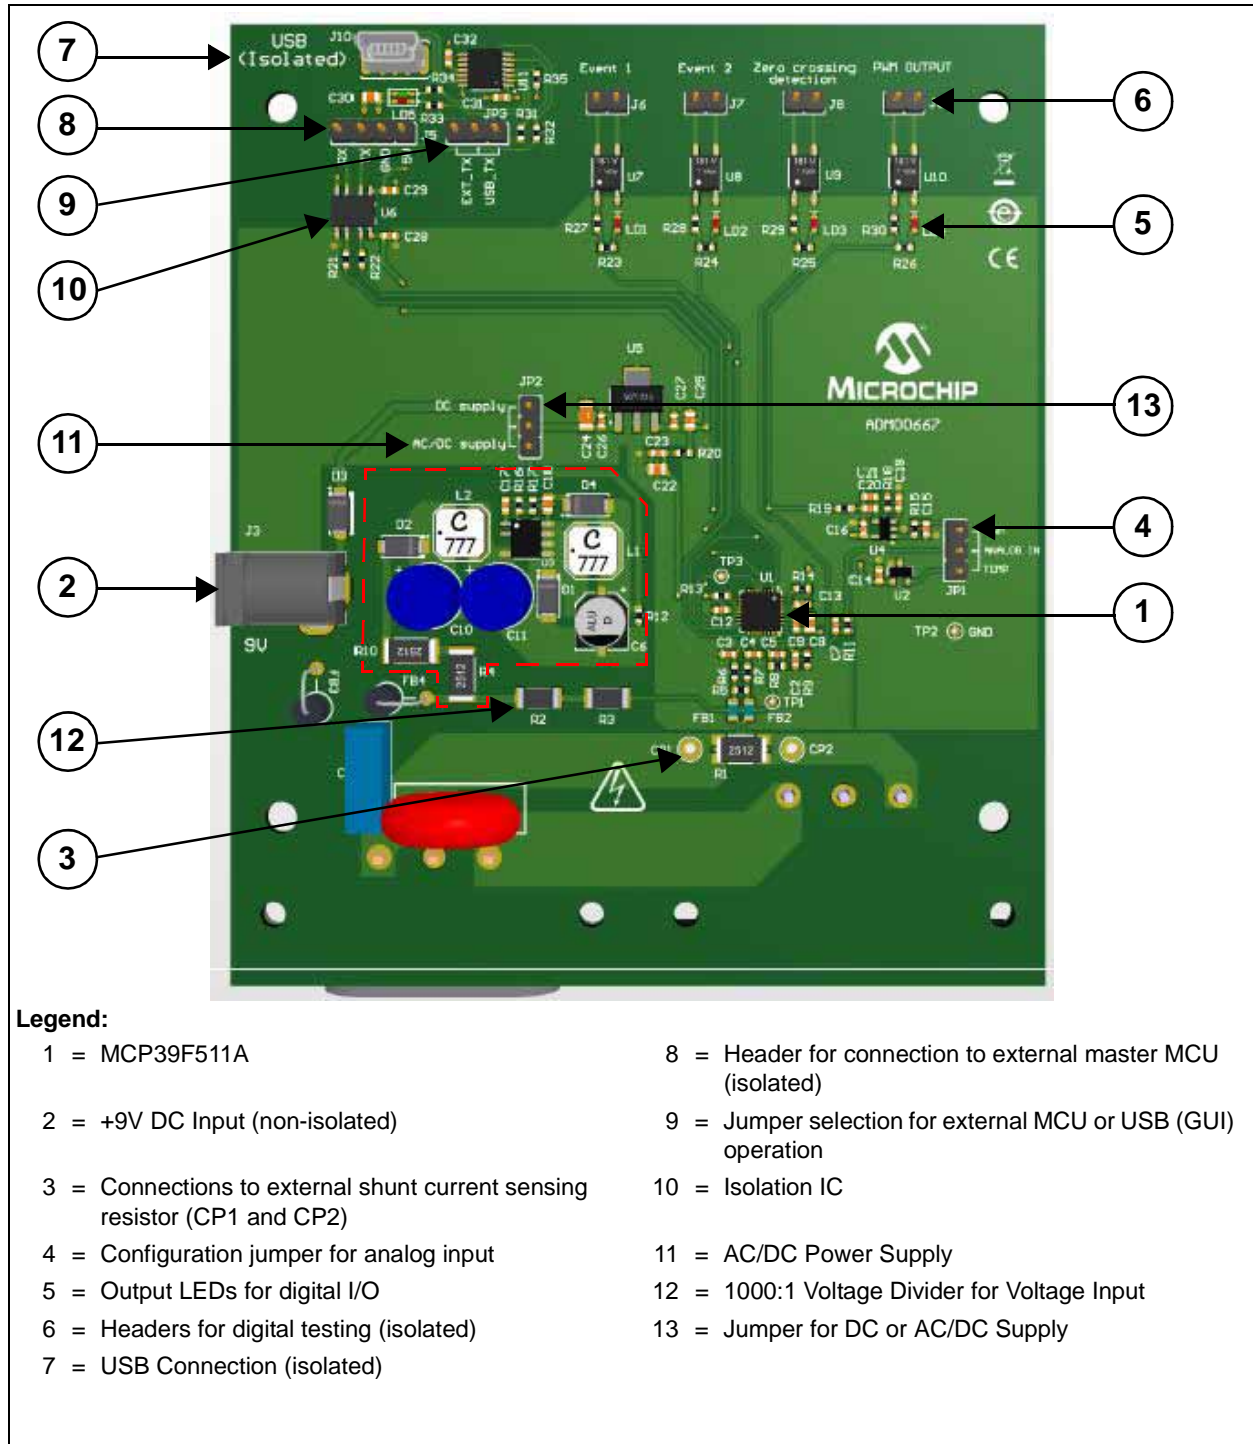

# MCP39F511A Power Monitor Demonstration Board User's Guide

**FIGURE 3-2:** MCP39F511A Power Monitor Demonstration Board Bottom View.

3.1 INPUT AND ANALOG FRONT END

The MCP39F511A Power Monitor Demonstration Board operates from 90V [rms] to 230V [rms]. The high-voltage line and neutral connections are located at the bottom of the board. The shunt sits on the neutral or the low side of a two-wire system. The MCP39F511A Power Monitor Demonstration Board comes populated with a surface mount 2 mΩ shunt. When using a lower value external shunt, twist together the wires going from the external shunt to the CP1 and CP2 connections.

The neutral side of the two-wire system goes into a resistor divider on the voltage channel input. Anti-aliasing low-pass filters are inserted on the input pins. The voltage channel uses two 499 kΩ resistors to achieve a divider ratio of 1000:1. For a line voltage of 220 V<sub>RMS</sub>, the channel 1 input signal size is 220 mV<sub>RMS</sub>.

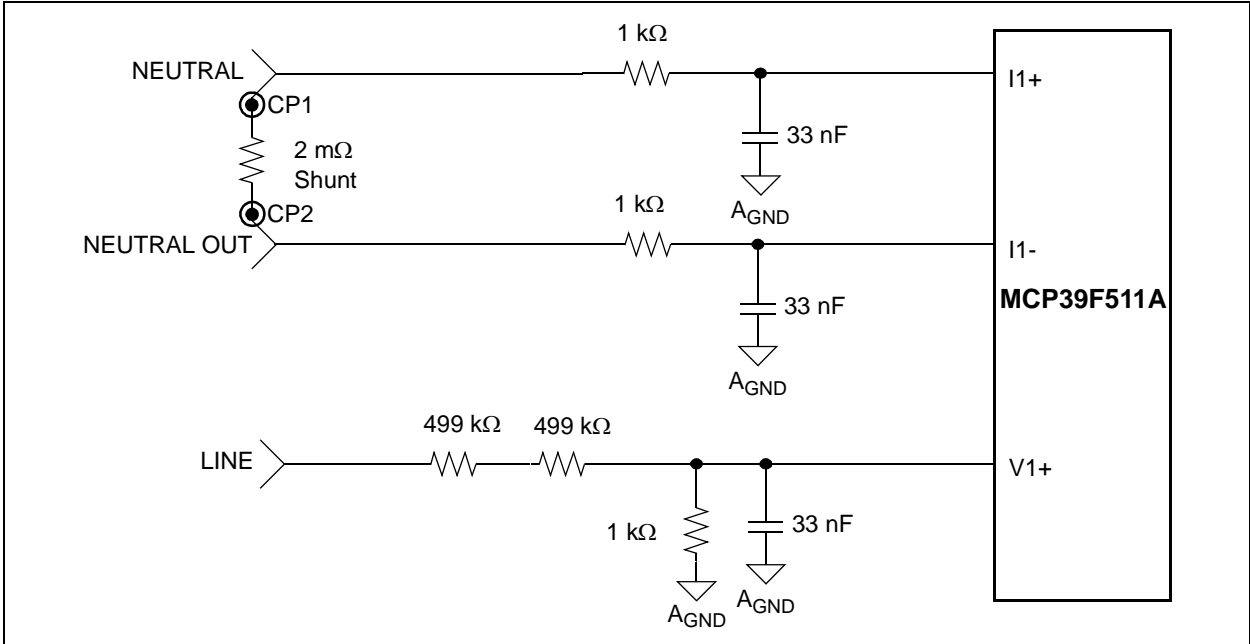

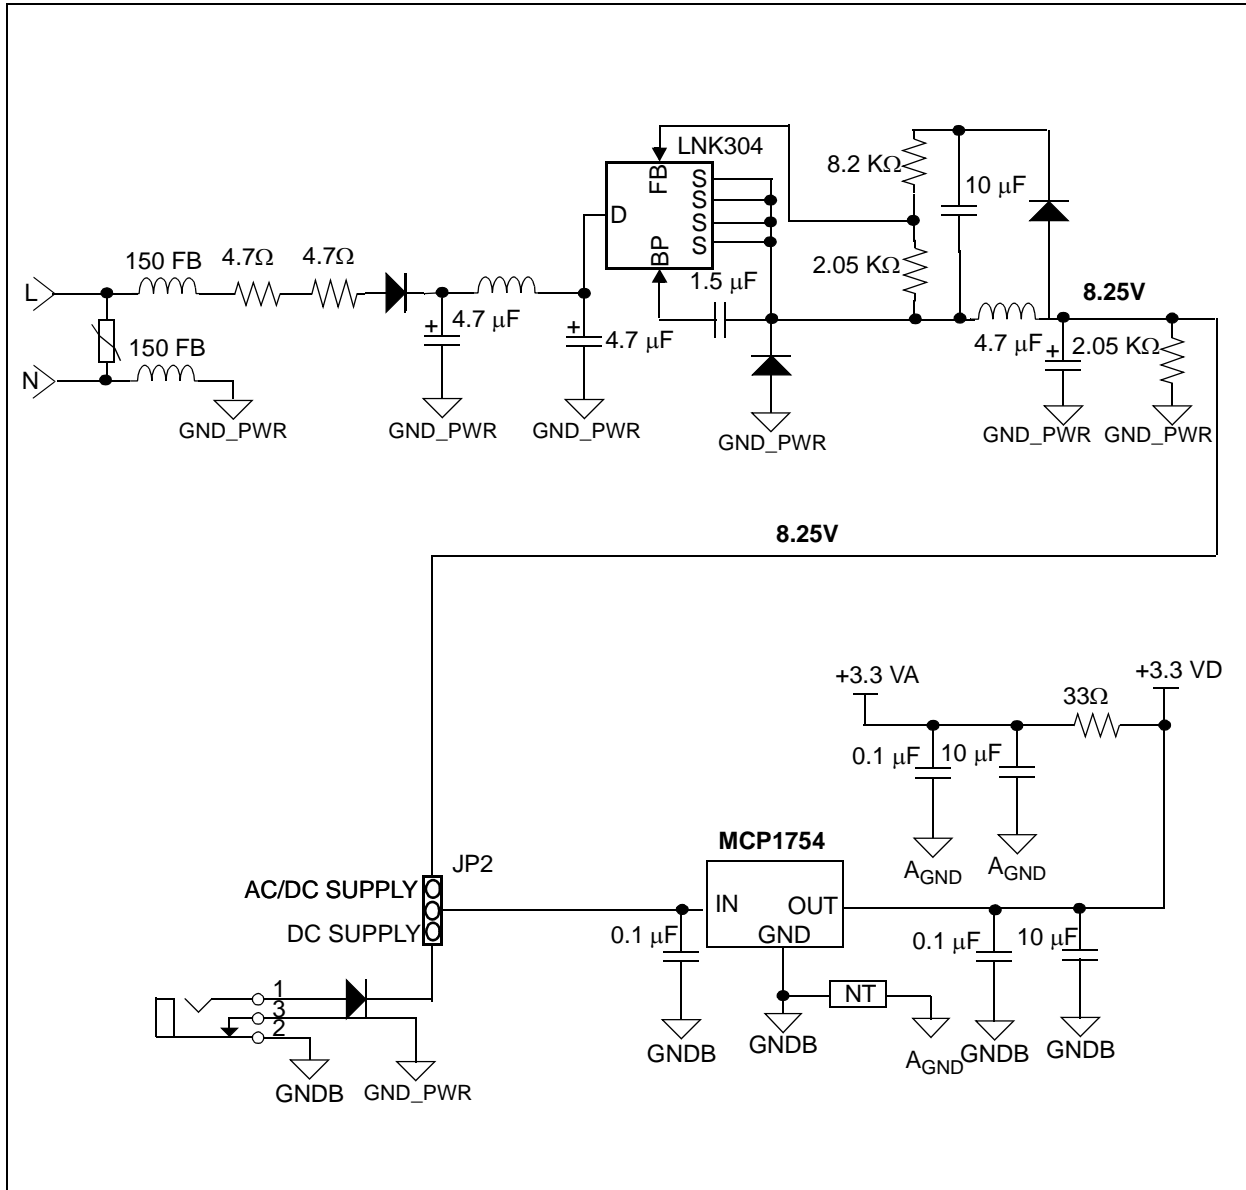

FIGURE 3-3: Analog Front-End Circuitry.

**Note:** All of the analog circuitry associated with this part of the circuit is connected to the analog ground plane (AGND).

# MCP39F511A Power Monitor Demonstration Board User's Guide

## 3.2 POWER SUPPLY CIRCUIT

The power supply circuit for the MCP39F511A Power Monitor Demonstration Board is shown in [Figure 3-4](#).

**FIGURE 3-4:** Power Supply Circuit with Option for AC/DC Switching Supply from Mains or DC Supply.

**Note:** When using an external power supply, the jumper needs to be moved on DC SUPPLY position. When the power plug is inserted into the input jack, the ground of the meter is disconnected from the NEUTRAL, so no measurements can be taken. The external power supply is useful for serial communication purposes only.
