INDUCTORS

公TDK

Inductors for power circuits Wound metal SPM-LR series

SPM4020-LR type

FEATURES

O Magnetic shield type wound inductor for power circuits using a metallic magnetic material.

○ Low-profile product.

- O Compared to ferrite wound type inductors, it is possible to achieve large current, low Rdc, and compactness.
- O Low inductance variance in high-temperature environments with good DC superimposition characteristics.

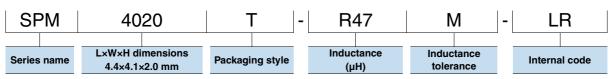

O Metallic magnetic material is used, and the structure has an integrated molded coil, so hum noise is lower than with core adhesive coils.

APPLICATION

O Tablet terminals, note PCs, HDDs, servers, VRMs, compact power supply modules, other

O Application guides: Smart phones/tablets

* Rated current: smaller value of either Isat or Itemp.

Isat: When based on the inductance change rate (30% below the initial value)

Itemp: When based on the temperature increase (temperature increase of 40°C by self heating)

Measurement equipment

| Measurement item | Product No. | Manufacturer |

REMINDERS FOR USING THESE PRODUCTS

Before using these products, be sure to request the delivery specifications.

SAFETY REMINDERS

Please pay sufficient attention to the warnings for safe designing when using this products.

| The storage period is less than 12 months. Be sure to follow the storage conditions (temperature: 5 to 40°C, humidity: 10 to 75% RH or less). If the storage period elapses, the soldering of the terminal electrodes may deteriorate. | | | |
|--|--|--|--|
| | | | |
| O Do not use or store in locations where there are conditions such as gas corrosion (salt, acid, alkali, etc.). | | | |
| Before soldering, be sure to preheat components. The preheating temperature should be set so that the temperature difference between the solder temperature and chip temperatur does not exceed 150°C. | | | |
| Soldering corrections after mounting should be within the range of the conditions determined in the specifications. If overheated, a short circuit, performance deterioration, or lifespan shortening may occur. | | | |
| When embedding a printed circuit board where a chip is mounted to a set, be sure that residual stress is not given to the chip due to the overall distortion of the printed circuit board and partial distortion such as at screw tightening portions. | | | |
| Self heating (temperature increase) occurs when the power is turn design. | ed ON, so the tolerance should be sufficient for the set thermal | | |
| Carefully lay out the coil for the circuit board design of the non-magnetic shield type. A malfunction may occur due to magnetic interference. | | | |
| \bigcirc Use a wrist band to discharge static electricity in your body through t | he grounding wire. | | |
| \bigcirc Do not expose the products to magnets or magnetic fields. | | | |
| O Do not use for a purpose outside of the contents regulated in the del | ivery specifications. | | |
| The products listed on this catalog are intended for use in general electronic equipment (AV equipment, telecommunications equipment, home appliances, amusement equipment, computer equipment, personal equipment, office equipment, measurement equipment, industrial robots) under a normal operation and use condition. The products are not designed or warranted to meet the requirements of the applications listed below, whose performance and/or quality require a more stringent level of safety or reliability, or whose failure, malfunction or trouble could cause serious damage to society, person or property. If you intend to use the products in the applications listed below or if you have special requirements exceeding the range or conditions set forth in the each catalog, please contact us. | | | |
