Subminiature Coaxial Switch 1.35 mm High, DC to 11 GHz

MS-156C Series

Overview

Developed for inspection of high frequency circuits used in portable terminals. Verification of the circuit performance is accomplished by simply inserting the external plug in the board mounted receptacle. This action re-directs the circuit from normal condition to the plug side. Removing the plug restores circuit to its normal condition.

■Circuit diagram

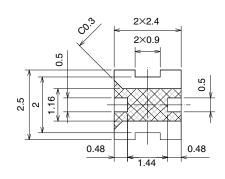

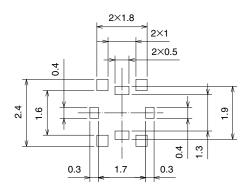

● PCB mounting pattern and metal mask dimensions

- * Request drawing of the specific part for exact dimensions and tolerances.
- * Specified dimensions must be followed to assure correct board placement and performance.

PCB mounting pattern

Metal mask dimensions 0.1 thick

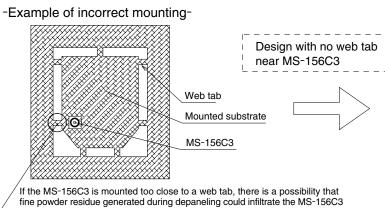

This area must be free of conductive traces and resist field.

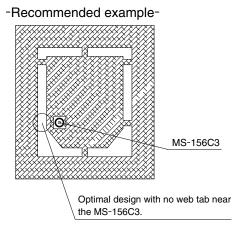

♦ Precautions

- 1. Mounting this product using PCB patterns or metal mask dimensions other than the ones specified, may result in a product malfunction due to solder and/or flux wicking.
- 2. Cross-hatched area shown on the PCB mounting pattern must be free of any conducive traces. Placing conductive traces in this area may affect performance and will void product warranties. When the bottom surface of the product (i.e., the shaded area of the specified land dimensions diagram on the previous page) has been processed with a susbtrate copper trace and resist processing, Hirose Electric will not be able to warrant the product.
- 3. Do not use hand soldering for mounting of MS-156C3.

 Doing so could result in solder and flux wicking to the contact areas.
- 4. Exercise caution as not to allow any debris to enter the board mounted MS-156C when cutting PCB.

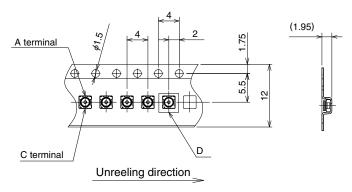

- 5. This product is intended for use only in testing the circuit. It cannot be used as an interface.
- 6. Please refrain from using the product in environments specifically affected by excessive vibration, shock, dust, high humidity, gases, very high temperatures and very low temperatures such as outdoor equipment. It might cause degradation or destruction of the product. Even if it endures during a short time, long time quarification is not quaranteed.
- 7. Plugs can be roughly classified to two types.
 - For mass production line automatic check (Press down type)
 - For manual check (With retentive lock): Unable to be used at production line.
- 8. Do not use the washing process.

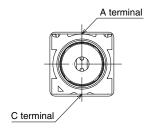

swich and cause damage.

- 9. Please use a design in which the device housing does not exert pressure or force on the MS-156C in the event that the finished device is accidently dropped.
- 10. Do not apply heat(heat gun or hot plate) over 260°C for more than 10 seconds. Exceeding this thermal limit could cause the resin to melt and cause deformation.
- 11. When automatic inspections are to be performed during the manufacturing operations, request the MS-156 plug connector manual for examples of implementation.
